This Groundwater Report is a product of the commitment that the San Joaquin County Flood Control and Water Conservation District together with many other interested agencies made to sustain and enhance the groundwater resources of the Eastern San Joaquin Basin. The District extends thanks to...

California Water Service

City of Lathrop

City of Lodi

City of Manteca

City of Stockton Municipal Utilities Department

East Bay Municipal Utility District

Libby-Owens-Ford, Lathrop

Morada Area Association

Newark Sierra Paperboard Company

Pacific Gas and Electric Company

San Joaquin County Department of Public Works

State of California, Department of Water Resources, Central District

Stockton East Water District

United States Bureau of Reclamation

United States Geological Survey

Most of all, we would like to thank all of the individual well owners, who give us access to their wells and in some cases some of their time.

## **San Joaquin County Flood Control and Water Conservation District**

### **Fall 2017 Groundwater Report**

#### **Introduction**

Since the fall of 1971, the San Joaquin County Flood Control and Water Conservation District has monitored groundwater levels and groundwater quality and has published the data in the Semi-annual Groundwater Report. This report utilizes data from federal, state and local government agencies as well as non-governmental sources.

Water level data is collected on a semi-annual basis, during the months of March and October, to observe groundwater levels before and after peak groundwater pumping conditions. Over 550 wells, of which 270 are measured by County staff, are included in the Monitoring Program. The exact number of wells varies from year to year, depending on circumstances such as destructions, new well construction, well accessibility, and well condition.

#### **Purpose**

The purpose of the Semi-annual Groundwater Report is to provide information on groundwater conditions in San Joaquin County and to publish the results of the groundwater monitoring program which consists of the following:

1. Monitor groundwater quality along a North-South line from the north of the City of Stockton to the City of Lathrop.
2. Measure groundwater levels on a County-wide basis.

In general, water quality data is more meaningful after peak production which usually occurs during the summer months. Therefore, groundwater quality data will be published only in the fall report. The groundwater depth and elevation data will be published both in the spring and fall.

Saline intrusion from the west is a continuing concern affecting the quality of groundwater in the Eastern San Joaquin Groundwater Basin. Groundwater quality analysis is completed on an annual basis, from approximately 18 municipal and domestic supply wells (exact number varies from year to year) located in proximity to the saline front.

## **Procedure**

Groundwater quality sampling is conducted on an annual basis during the month of October, along with the Fall measurements. Approximately 18 wells are currently sampled. The exact number of wells may vary depending on well access and other conditions. Replicate groundwater samples (two) are analyzed for Chloride ( $\text{Cl}^-$ ) by BC Laboratories, Inc., and analyzed for Total dissolved solids (TDS). Electric conductivity is calculated using the formula:  $\text{EC} = \text{TDS} / 0.64 * 1000$ . Data is then stored in a database for accessibility and reporting requirements.

Water level measurements are performed with the use of either a steel chain or sounder. Data is then immediately recorded in field books and then stored in a database for accessibility and reporting requirements.

## **Section 1 – Rainfall Distribution**

### **Summary of Rainfall Distribution**

The underlying groundwater basin levels in San Joaquin County respond to changes in annual precipitation. There are four total annual precipitation graphs and four monthly precipitation graphs included in this report (Figures 1-1 through 1-8). These graphs reflect three areas located across San Joaquin County and one area in Calaveras County. The station located at the Stockton Fire Station, as well as the station located in Tracy Carbona, has data beginning in 1940. Lodi station has data from 1949 to 2017. The Camp Pardee station has data available from 1949 to 2017.

## Section 2 - Groundwater Quality Monitoring

### Summary of Groundwater Quality Results

The information contained in the Fall 2017 Groundwater Report is as follows:

North San Joaquin County – No wells were sampled.

North Stockton – Four wells were tested for Cl<sup>-</sup>, EC and TDS in North Stockton. Three wells increased in Cl<sup>-</sup> concentrations from fall 2016. Sample holding times for Cl<sup>-</sup> were exceeded. Three wells increased in EC and TDS.

County Hospital Area – Due to access constraints no wells were tested in this area this year.

Lathrop – Two wells were sampled in Lathrop. One well increased in Cl<sup>-</sup> concentrations from fall 2016. Sample holding times for Cl<sup>-</sup> were exceeded. One well increased in EC and TDS.

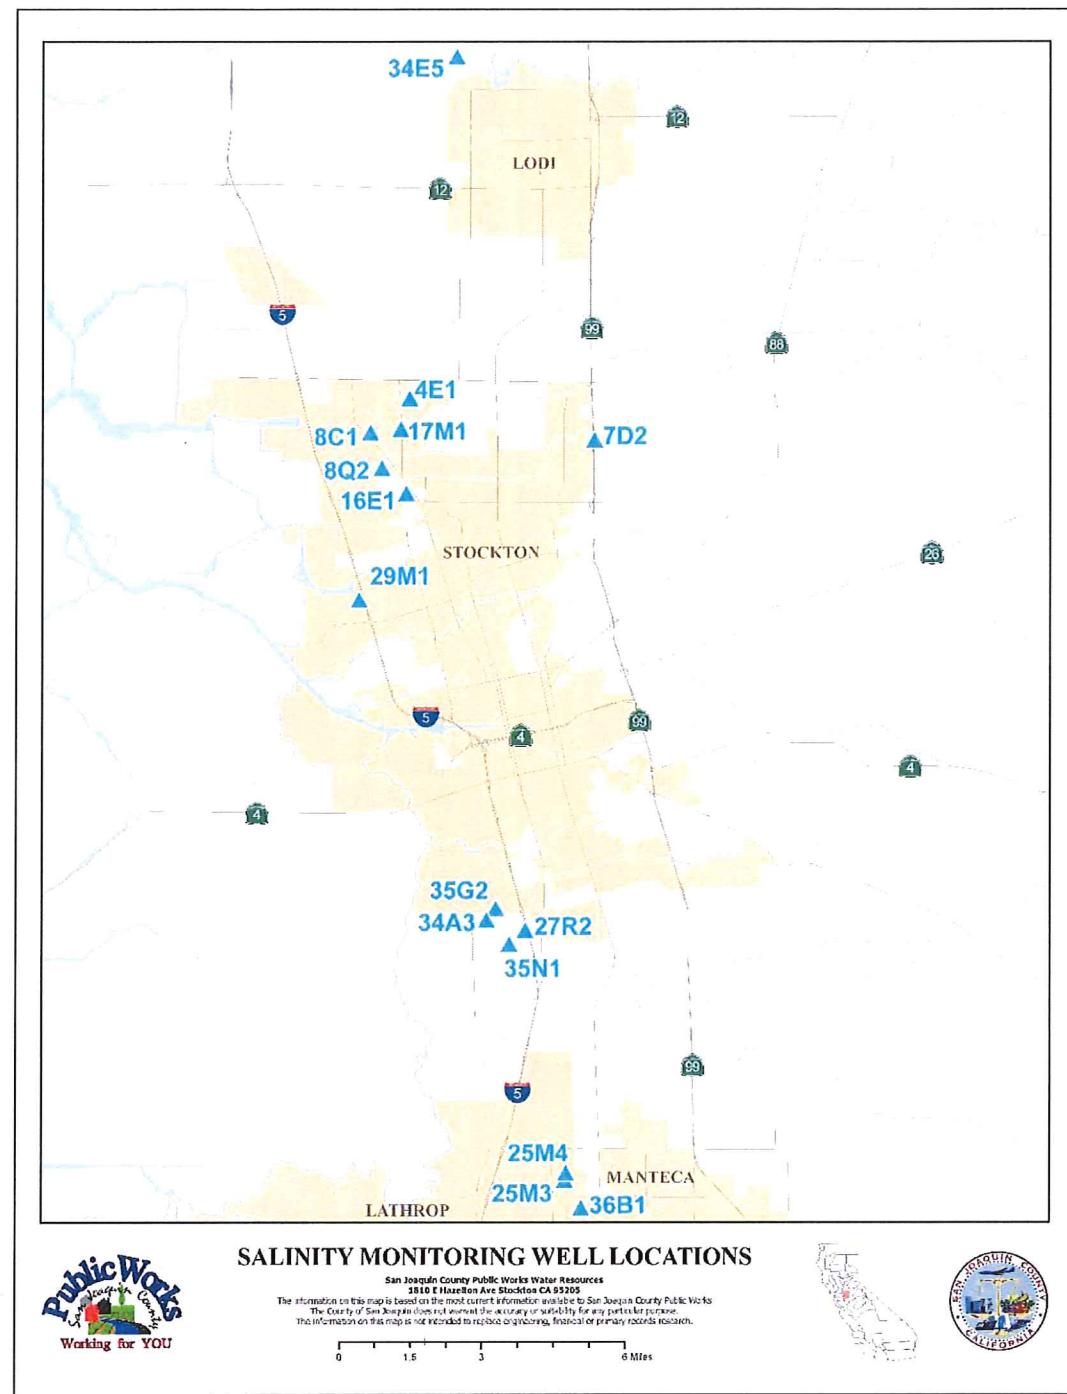

Figure 2-1: Salinity Monitoring Well Locations

Table 2-1: Groundwater Quality Mineral Analysis Fall 2017

Well	Chloride <sup>1</sup> (ppm)	EC* (mmho)	TDS (ppm)
34A3	-	-	-
35G2	-	-	-
35N1	-	-	-
25M3	64	0.734	470
25M4	37	0.531	340
36B1	-	-	-
4E1	30	0.688	440
8C1	38	0.828	530
8Q2	-	-	-
16E1	-	-	-
17M1	-	-	-
29M1	83	0.609	390
7D2	5.3	0.484	310
34E5	-	-	-

\*EC values are calculated by the following formula: EC = TDS/(0.64\*1000)

<sup>1</sup> Sample holding times for Chloride were exceeded before test occurred.

## Section 3 – Groundwater Elevation Monitoring

### Summary of Groundwater Elevations

The information contained in the Fall 2017 Groundwater Report is summarized as follows:

#### GROUNDWATER LEVELS

Central San Joaquin Water Conservation District (CSJWCD) – Twenty-three (23) wells could be compared in CSJWCD. Seven (7) show decreases in groundwater levels. Sixteen (16) wells show increases in groundwater levels.

North San Joaquin Water Conservation District (NSJWCD) – One-hundred twelve (112) wells were compared in NSJWCD. Twenty-seven (27) wells decreased in groundwater levels. Eighty-three (83) wells increased in groundwater levels. Two (2) wells had no change in groundwater levels.

Oakdale Irrigation District (OID) – One (1) well was compared in the OID area. The well decreased in groundwater level.

Stockton East Water District (SEWD) – Fifty-eight (58) wells were compared in SEWD. Sixteen (16) wells decreased in groundwater levels. Forty-two (42) wells increased in groundwater levels.

South San Joaquin Irrigation District (SSJID) – Twenty-two (22) wells were compared in the SSJID area. Seven (7) wells decreased in groundwater levels. Fifteen (15) wells increased in groundwater levels.

Woodbridge Irrigation District (WID) – Twenty-two (22) wells were compared in WID. One (1) wells decreased in groundwater levels. Twenty-one (21) well increased in groundwater level.

Southwest County Areas – Thirty-two (32) wells were compared across the Southwest County. Five (5) wells decreased in groundwater levels. Twenty-six (26) wells increased in groundwater levels. One (1) well had no change in groundwater level.
