This Groundwater Report is a product of the commitment that the San Joaquin County Flood Control and Water Conservation District together with many other interested agencies made to sustain and enhance the groundwater resources of the Eastern San Joaquin Basin. The District extends thanks to...

California Water Service

City of Lathrop

City of Lodi

City of Manteca

City of Stockton Municipal Utilities Department

East Bay Municipal Utility District

Libby-Owens-Ford, Lathrop

Morada Area Association

Newark Sierra Paperboard Company

Pacific Gas and Electric Company

San Joaquin County Department of Public Works

State of California, Department of Water Resources, Central District

Stockton East Water District

United States Bureau of Reclamation

United States Geological Survey

Most of all, we would like to thank all of the individual well owners, who give us access to their wells and in some cases some of their time.

# **San Joaquin County Flood Control and Water Conservation District**

## **Fall 2015 Groundwater Report**

### **Introduction**

Since the fall of 1971, the San Joaquin County Flood Control and Water Conservation District has monitored groundwater levels and groundwater quality and has published the data in the Semi-annual Groundwater Report. This report utilizes data from federal, state and local government agencies as well as non-governmental sources.

Water level data is collected on a semi-annual basis, during the months of April and October, to observe groundwater levels before and after peak groundwater pumping conditions. Over 550 wells, of which 270 are measured by County staff, are included in the Monitoring Program. The exact number of wells varies from year to year, depending on circumstances such as destructions, new well construction, well accessibility, and well condition.

### **Purpose**

The purpose of the Semi-annual Groundwater Report is to provide information on groundwater conditions in San Joaquin County and to publish the results of the groundwater monitoring program which consists of the following:

1. Monitor groundwater quality along a North-South line from the north of the City of Stockton to the City of Lathrop.
2. Measure groundwater levels on a County-wide basis.

In general, water quality data is more meaningful after peak production which usually occurs during the summer months. Therefore, groundwater quality data will be published only in the fall report. The groundwater depth and elevation data will be published both in the spring and fall.

Saline intrusion from the west is a continuing concern affecting the quality of groundwater in the Eastern San Joaquin Groundwater Basin. Groundwater quality analysis is completed on an annual basis, from approximately 18 municipal and domestic supply wells (exact number varies from year to year) located in proximity to the saline front.

## **Procedure**

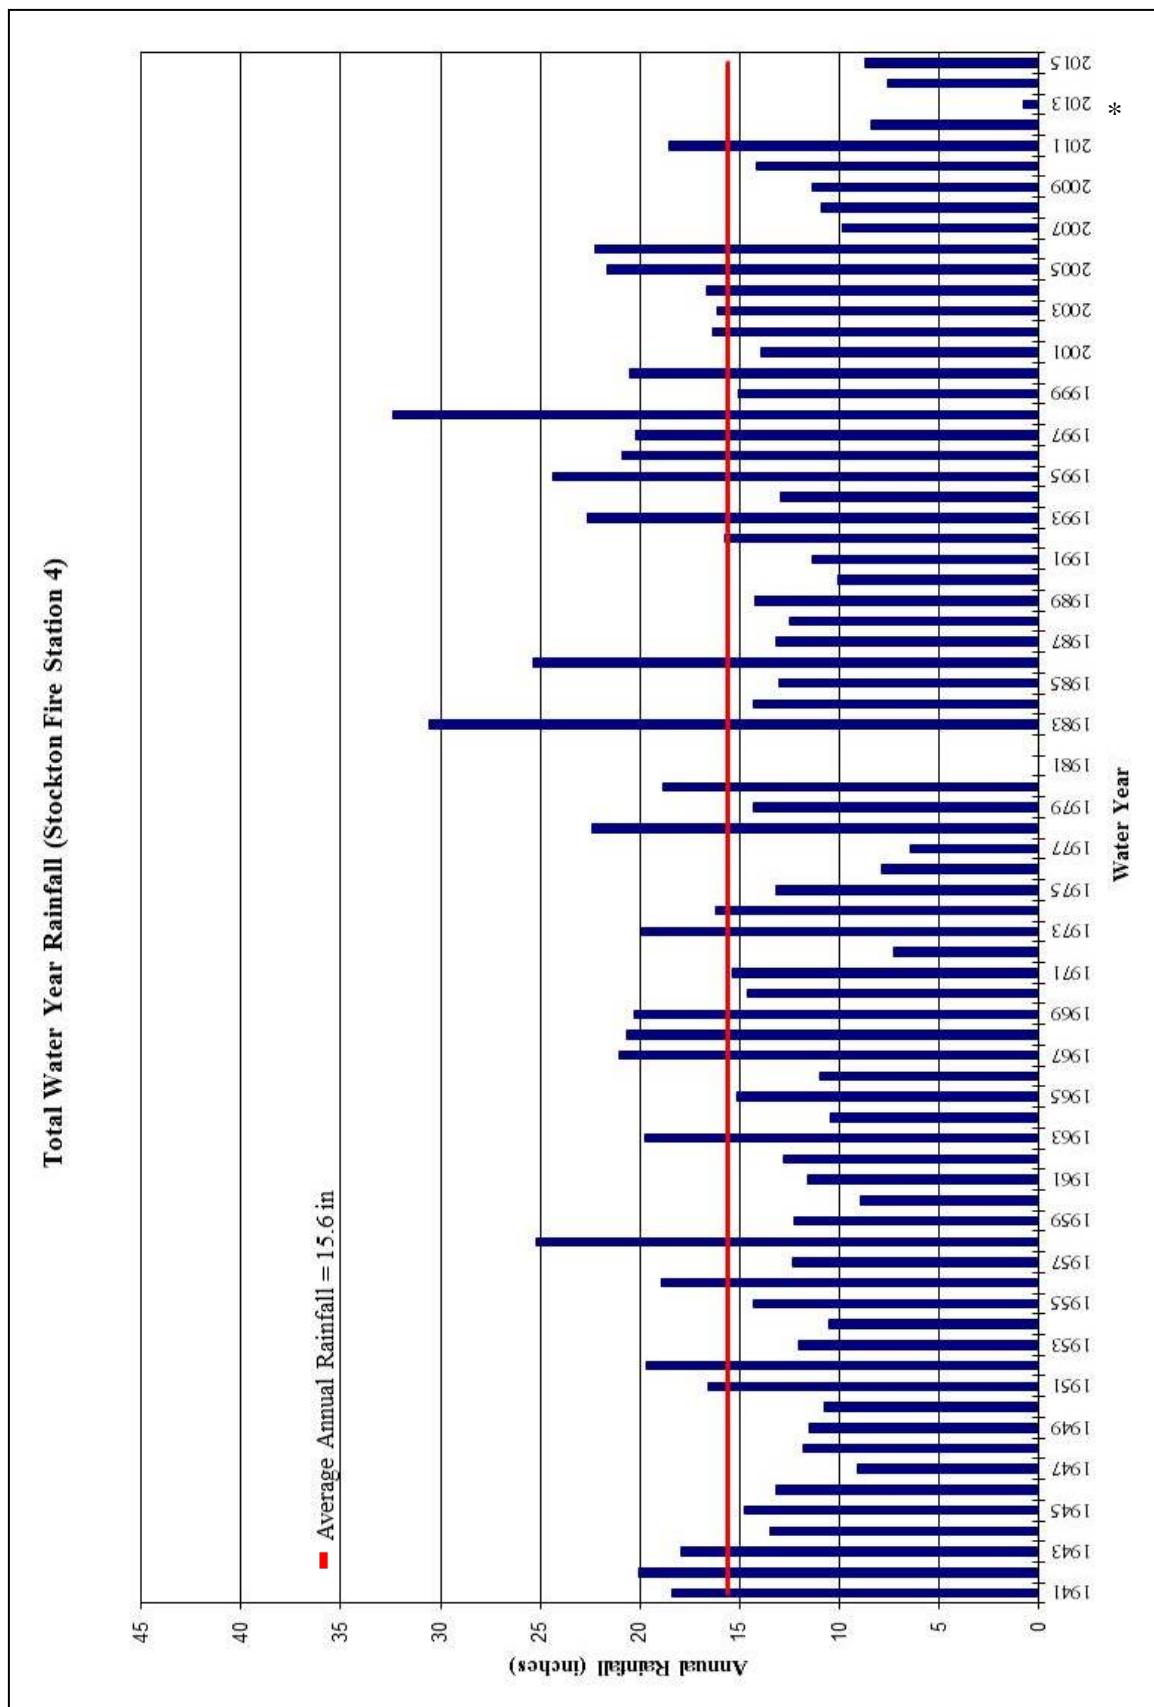

Groundwater quality sampling is conducted on an annual basis during the month of October, along with the Fall measurements. Approximately 18 wells are currently sampled. The exact number of wells may vary depending on well access and other conditions. Replicate groundwater samples (two) are analyzed for Chloride ( $\text{Cl}^-$ ) by Fruit Growers Laboratory, Inc., and analyzed for Electrical Conductivity (EC) using DiST 3 by Hanna Instruments. Total Dissolved Solids (TDS) are calculated using the formula:  $\text{TDS} = 0.64 \times \text{EC}$  (umhos). Data is then stored in a database for accessibility and reporting requirements.

Water level measurements are performed with the use of either a steel chain or sounder. Data is then immediately recorded in field books and then stored in a database for accessibility and reporting requirements.

## **Section 1-Rainfall Distribution**

### **Summary of Rainfall Distribution**

The underlying groundwater basin levels in San Joaquin County respond to changes in annual precipitation. There are four total annual precipitation graphs and four monthly precipitation graphs included in this report (Figures 1-1 through 1-8). These graphs reflect three areas located across San Joaquin County and one area in Calaveras County. The station located at the Stockton Fire Station No. 4, as well as the station located in Tracy Carbona, has pertinent data beginning in 1940. Lodi station has data from 1949 to 2015. The Camp Pardee station has data available from 1949 to 2015.

**Figure 1-1: Total Annual Rainfall (Stockton Fire Station 4)**

\* Some data for 2012-2013 Water Year is missing. Total in graph does not reflect actual precipitation

## **Section 2 – Groundwater Quality Monitoring**

### **Summary of Groundwater Quality Results**

The information contained in the Fall 2015 Groundwater Report is summarized as follows:

North San Joaquin County – Due to access constraints no wells was tested in this area this year.

North Stockton – Five wells were tested for Cl<sup>-</sup>, EC and TDS in North Stockton. One of the wells increased in Cl<sup>-</sup>, EC and TDS concentrations from the previous measurements in the fall of 2014. Two of the wells decreased in Cl<sup>-</sup>, EC and TDS concentrations, and two of the wells were not comparable to the analysis in the fall 2014.

County Hospital Area – Due to access constraints no wells was tested in this area this year.

Lathrop – Two wells were sampled in Lathrop. One of the wells decrease in Cl<sup>-</sup> concentrations and the other increased in Cl<sup>-</sup> concentrations. One of the wells decrease in EC and TDS concentrations and the other increased in EC and TDS from the analysis in the fall 2014.

## **Section 3 – Groundwater Elevation Monitoring**

### **Summary of Groundwater Elevations**

The information contained in the Fall 2015 Groundwater Report is summarized as follows:

#### **GROUNDWATER LEVELS**

Central San Joaquin Water Conservation District (CSJWCD) – Forty-eight (48) wells were able to be compared in CSJWCD. Forty-one (41) show decreases in groundwater levels. Six (6) wells show an increase in groundwater levels. One (1) well had no change in groundwater elevation.

North San Joaquin Water Conservation District (NSJWCD) – One-hundred six (106) wells were compared in NSJWCD. Ninety-four (94) wells decreased in groundwater levels. Ten (10) wells increased in groundwater levels. Two (2) wells had no change in groundwater elevation.

Oakdale Irrigation District (OID) – One (1) well was compared in the OID area. The well decreased in groundwater elevation.

Stockton East Water District (SEWD) – One-hundred six (106) wells were compared in SEWD. Ninety (90) wells decreased in groundwater levels. Fifteen (15) wells show increases in groundwater levels. One (1) well had no change in groundwater elevation.

South San Joaquin Irrigation District (SSJID) – Twenty-six (26) wells were compared in the SSJID area. Twenty-five (25) wells declined in groundwater elevation. One (1) increased in groundwater elevation.

Woodbridge Irrigation District (WID) – Twenty-three (23) wells were compared in WID. Nineteen (19) wells decreased in groundwater levels. Three (3) wells shows increase in groundwater levels. One (1) well had no change in groundwater elevation.

Southwest County Areas – Twenty-nine (29) wells compared across the Southwest County. Eight (8) wells descended in groundwater levels. Twenty-one (21) wells increased in groundwater level.

Eastern San Joaquin Groundwater Sub-basin in Calaveras County – Ten (10) wells compared in Calaveras County. Four (4) wells descended in groundwater levels. Six (6) wells increased in groundwater level.

Eastern San Joaquin Groundwater Sub-basin in Stanislaus County – Seven (7) wells compared in Stanislaus County. Five (5) wells descended in groundwater levels. Two (2) wells increased in groundwater level.
