This Groundwater Report is a product of the commitment that the San Joaquin County Flood Control and Water Conservation District together with many other interested agencies made to sustain and enhance the groundwater resources of the Eastern San Joaquin Basin. The District extends thanks to...

California Water Service

City of Lathrop

City of Lodi

City of Manteca

City of Stockton Municipal Utilities Department

East Bay Municipal Utility District

Libby-Owens-Ford, Lathrop

Morada Area Association

Newark Sierra Paperboard Company

Pacific Gas and Electric Company

San Joaquin County Department of Public Works

State of California, Department of Water Resources, Central District

Stockton East Water District

United States Bureau of Reclamation

United States Geological Survey

Most of all, we would like to thank all of the individual well owners, who give us access to their wells and in some cases some of their time.

# **San Joaquin County Flood Control and Water Conservation District**

## **Spring 2011 Groundwater Report**

### **Introduction**

Since the fall of 1971, the San Joaquin County Flood Control and Water Conservation District has monitored groundwater levels and groundwater quality and has published the data in the Semi-annual Groundwater Report. This report utilizes data from federal, state and local government agencies as well as non-governmental sources.

Water level data is collected on a semi-annual basis, during the months of April and October, to observe groundwater levels before and after peak groundwater pumping conditions. Over 550 wells, of which 270 are measured by County staff, are included in the Monitoring Program. The exact number of wells varies from year to year, depending on circumstances such as destructions, new well construction, well accessibility, and well condition.

### **Purpose**

The purpose of the Semi-annual Groundwater Report is to provide information on groundwater conditions in San Joaquin County and to publish the results of the groundwater monitoring program which consists of the following:

1. Monitor groundwater quality along a North-South line from the north of the City of Stockton to the City of Lathrop.
2. Measure groundwater levels on a County-wide basis.

In general, water quality data is more meaningful after peak production which usually occurs during the summer months. Therefore, groundwater quality data will be published only in the fall report. The groundwater depth and elevation data will be published both in the spring and fall.

Saline intrusion from the west is a continuing concern affecting the quality of groundwater in the Basin. Groundwater quality analysis is completed on an annual basis, from approximately 18 municipal and domestic supply wells (exact number varies from year to year) located in proximity to the saline front.

## **Procedure**

Groundwater quality sampling is conducted on an annual basis during the month of October, along with the Fall Measurements. Approximately 18 wells are currently sampled. The exact number of wells may vary depending on well access and other conditions. Replicate groundwater samples (two) are analyzed for Chloride ( $\text{Cl}^-$ ) using the Thomas Scientific 675 pH/ISE meter in conjunction with the ISE  $\text{Cl}^-$  Combination Electrode, and analyzed for Electrical Conductivity (EC) using DiST 3 by Hanna Instruments. Total Dissolved Solids (TDS) are calculated using the formula:  $\text{TDS} = 0.64 \times \text{EC}$  (umhos). Data is then stored in a database for accessibility and reporting requirements.

Water Level Measurements are performed with the use of either a steel chain or sounder. Data is then immediately recorded in field books and then stored in a database for accessibility and reporting requirements.

## **Section 1- Annual Rainfall Distribution**

### **Summary of Annual Rainfall Distribution**

The groundwater basin in San Joaquin County responds to changes in annual precipitation. There are four total annual precipitation graphs and four monthly precipitation graphs included in this report (Figures 1-1 through 1-8). These graphs reflect three areas located across San Joaquin County and one area in Calaveras County. The station located at the Stockton Fire Station No. 4 as well as the station located in Tracy, has pertinent beginning in 1940. Lodi station has data from 1949 to 2011. The Camp Pardee station has data available from 1949 to 2011.

## Section 2 – Groundwater Elevation Monitoring

### Summary of Groundwater Elevations

The information contained in the Spring 2011 Groundwater Report is summarized as follows

### GROUNDWATER LEVELS

Banta-Carbona Irrigation District (BCID) – Two wells were compared in the BCID area. Both wells increased in groundwater elevation.

Central San Joaquin Water Conservation District (CSJWCD) – Sixty wells are monitored in CSJWCD. Fifty-one wells were able to be compared. Eight show decreases in groundwater levels. Forty-one wells show an increase in groundwater levels. Two well's groundwater level remained constant.

North San Joaquin Water Conservation District (NSJWCD) – One-hundred thirty-five are monitored in NSJWCD. One-hundred forty-one wells were able to be compared. Seventy-five wells decreased in groundwater levels. Fifty-eight wells increased in groundwater levels. Two wells experienced no change in groundwater level.

Oakdale Irrigation District (OID) – Five wells are monitored in the OID area. Three wells were able to be compared. One well shows a decrease in groundwater levels. Two wells increased in groundwater levels.

Stockton East Water District (SEWD) – One-hundred nineteen wells are monitored in SEWD. Ninety-three wells were able to be compared. Twenty-seven wells decreased in groundwater levels. Sixty-four wells show increases in groundwater levels. Two wells experienced no change in groundwater level.

South San Joaquin Irrigation District (SSJID) – Forty-three wells are monitored in the SSJID area. Forty-one wells were able to be compared. Seven wells show decreases in groundwater levels. Thirty-two wells show increases in groundwater levels. Two wells experienced no change in groundwater level.

Woodbridge Irrigation District (WID) – Thirty-four wells are monitored in the WID. Thirty wells were able to be compared. Five wells decreased in groundwater levels. Twenty-five wells show increases in groundwater levels.

Miscellaneous County Areas – Forty-seven wells are monitored across the County in areas that are not a part of a major irrigation district. Forty-two wells were able to be compared. Eight wells descended in groundwater levels. Thirty-one wells increased in groundwater levels. Three wells stayed constant.
